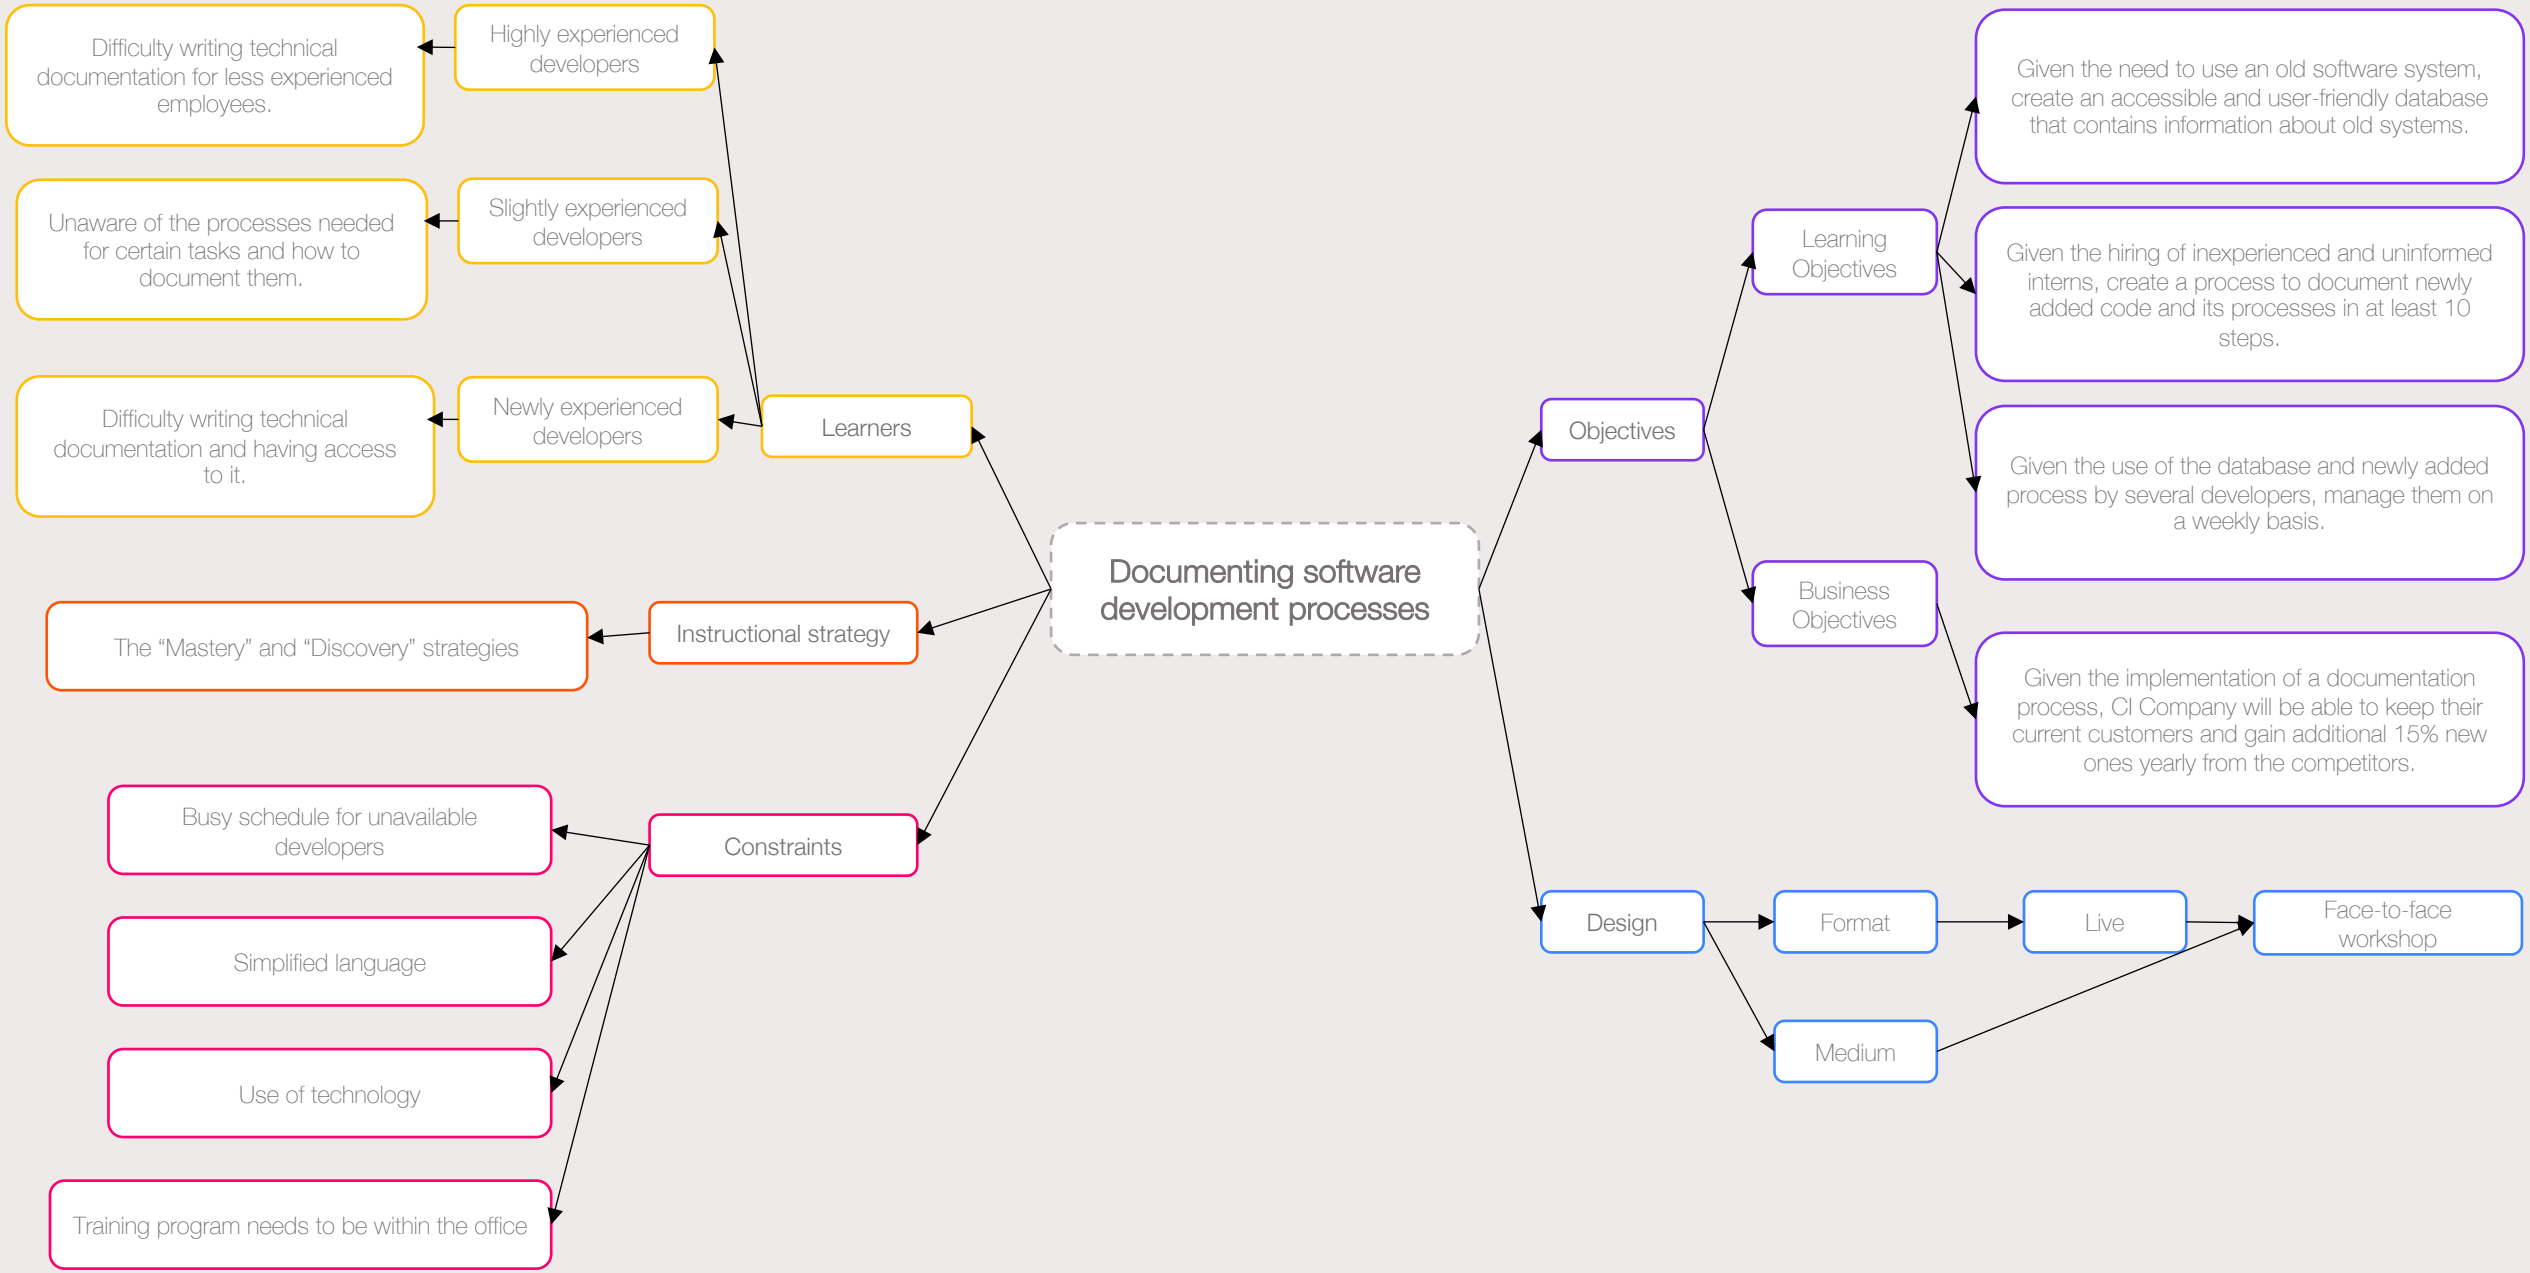
CONCEPT MAP



Documenting software development processes
Learners
Highly experienced developers
Difficulty writing technical documentation for less experienced employees.
Slightly experienced developers
Unaware of the processes needed for certain tasks and how to document them.
Newly experienced developers
Difficulty writing technical documentation and having access to it.
Instructional strategy
The “Mastery” and “Discovery” strategies
Constraints
Busy schedule for unavailable developers
Simplified language
Use of technology
Training program needs to be within the office
Objectives
Learning Objectives
Given the need to use an old software system, create an accessible and user-friendly database that contains information about old systems.
Given the hiring of inexperienced and uninformed interns, create a process to document newly added code and its processes in at least 10 steps.
Given the use of the database and newly added process by several developers, manage them on a weekly basis.
Business Objectives
Given the implementation of a documentation process, CI Company will be able to keep their current customers and gain additional 15% new ones yearly from the competitors.
